## ARMS® Dealership: Automated Rental Management System

The screenshot displays the ARMS Dealership software interface. On the left, there is a 'Rental Invoice' section with fields for 'Bill To: DEALERSHIP', 'RENTER INFORMATION', 'RENTAL INFORMATION', 'ADDITIONAL INFORMATION', and 'VEHICLES RENTED'. The 'VEHICLES RENTED' table shows a rental for a 2004 Mitsubishi Endeavor on 05/18/2015. In the center, there is a 'Vehicle Rental Application' form with fields for 'VRA Number', 'RO Number', 'Appt: YES', 'SA/Approver: 15', 'Cust Number: 1057622', 'Cust Name: ONE, CUSTOMER', 'Rental Provider: ENTERPRISE RENT-A-CAR', 'Reservation No: 123456', 'Ticket Number: 456789', 'Rental Status: OPEN', 'Rental Start: 05/18/2015', 'Rental End: 06/03/2015', and 'Close Pend:'. At the bottom, there is a 'Total Charges' summary showing a total amount due of \$79.98.

### Free\* Software for your CDK Global w.e.b.Suite™ or Drive System.

ARMS Dealership makes providing rentals to your customers easier, faster and more efficient than ever before. Created through a partnership between CDK Global and Enterprise Rent-A-Car®, the ARMS application is specifically designed to work hand in hand with your CDK Global w.e.b.Suite™ or Drive System, giving you instant access to a great new time-saving program.

### How ARMS Dealership works.

To users, ARMS Dealership is only a couple of additional screens on your CDK Global w.e.b.Suite™ or Drive System. When a customer needs a rental, your service advisor simply fills in a few pieces of information and then, automatically, the ARMS application sends a rental request reservation directly to Enterprise. The ARMS application allows the advisors to post rates, approve days, indicate the exact date and time to stop charges and communicate electronically with the local rental branch. As soon as the rental contract is closed, the invoice is automatically sent back to the CDK Global Service system, updating the repair order. Nothing's easier!

## Rental Management Is Now Easier.

### Saves time.

**Increase productivity and efficiency.** ARMS® Dealership provides real time integration between the CDK Global Repair Order system and Enterprise. From the creation of the appointment, through invoicing, the two systems communicate and trade information. This will eliminate many manual tasks, which allow your employees to be more efficient and productive.

### Increase customer satisfaction.

**Faster service means happier customers.** ARMS Dealership automatically takes all the customer's data from the appointment or RO and transfers it to Enterprise. Now instead of entering the same information twice, your customer gets into their rental vehicle faster.

### Better manage the rental process.

**Virtually eliminate phone calls and miscommunication.** While the customer is in the rental car, your service writers can make changes to rental information, number of days authorized, billing types (Warranty, Internal, Customer Pay) and they will be automatically sent to Enterprise. Numerous phone calls are eliminated and final invoices are more accurate.

**Callbacks? Not with ARMS®.** The old days of having to request a daily list of needed extensions are gone. ARMS Dealership provides an on-line list of all rentals requiring attention that day. Or, if you like, look ahead to other days to help you better manage your overall service program.

### Easier billing.

**Automatic update of rental charges.** With the ARMS application, when the customer is put into a rental vehicle, controls are activated in the CDK Global Repair Order system to ensure that the repair order cannot be closed until all charges are collected. Once the Enterprise rental is complete, payment amounts are immediately sent updating the service repair order. This helps ensure the accuracy of the rental and repair order amounts, and eliminates the Service Department from waiting on paper copies to complete the service invoice.

### Tracking rentals and reconciliation.

**Rental reports right from your desktop.** The CDK Global w.e.b.Suite™ or Drive System Fast Lane includes a new Stat that details the rental status, alerts if the customer is over their approved time and highlights any pending charges. In the case of closed repair orders, if the rental amount was overridden, a variance report will show the rental charges and the amount charged by Enterprise. Management can then easily spot the variance and take corrective action.

**Invoices at your fingertips.** Just type in the RO number or the customer name and ARMS Dealership retrieves it instantly. You can view invoices within the ARMS application or reprint a paper copy. No more searching for paper invoices.

### All this, and it's free\*.

**Save time. Increase efficiency and accuracy.** Deliver better customer service, and do it all free,\* with ARMS Dealership. All you have to do is say "I want ARMS Dealership for my CDK Global w.e.b.Suite™ or Drive System." Enterprise will then work with CDK Global to make sure you're ready for the upgrade. Enterprise will even come in and train your staff to ensure everyone knows how to use it effectively.

And that's the key to the ARMS application — rentals made easier. Ask your local Enterprise Rent-A-Car Representative for ARMS® Dealership today!
